

Al Jazeera ~ Riaan Hendricks ~ Working On Water

Nigerian architect *Kunle Adeyemi* is pioneering floating buildings to solve the issues of flooding and land occupation that affect hundreds of thousands in African coastal cities, including the 85,000 residents of the Makoko slum in Nigeria's capital Lagos.

Adeyemi envisages a city of floating buildings that, safe from rising tides, would allow the slum's residents to remain within their community, while at the same time improving the quality of their lives.

His studio has come up with an easy-to-build, low-cost sustainable prototype for a floating building, one of which is already being coveted by an overcrowded local school.
