

Megan Valley ~ Architecture Students Present Design Proposals For Affordable Housing Options

Eight undergraduate architecture students, directed by Kim Rollings, assistant professor of architecture, presented design proposals Friday for a facility that will provide safe and affordable housing options for homeless people in South Bend.

“Permanent supportive housing [PSH] links safe, affordable housing with social support services that address challenges associated with chronic homelessness, addiction and other disabilities,” Rollings said in an email. “The facility in South Bend will be the area’s first permanent supportive housing, with 32 one-bedroom apartments and a variety of shared and support spaces, including outdoor space.”

Rollings said she and the University’s School of Architecture became involved in the PSH project when she heard about it through the St. Joseph County Health Improvement Alliance, where she spoke about community-based teaching and research.

“I proposed the student project to the South Bend Heritage Foundation, who will own the local supportive housing facility, and Alliance Architects, the local firm designing the building,” she said. “They were very interested in learning from the students, as well as providing the students with a real-world project experience.”
