

Noam Chomsky: Another World Is Possible. Let's Bring It To Reality

Noam Chomsky

It's a truism that the world is in a dismal state; indeed, there are too many great challenges facing our world and the planet is in fact at a breaking point, as Noam Chomsky elaborates on an exclusive interview below for *Truthout*. What's less widely recognized is that another world is possible because the present one is simply not sustainable, says one of the world's greatest public intellectuals.

Chomsky is institute professor emeritus in the Department of Linguistics and Philosophy at MIT and laureate professor of linguistics and Agnese Nelms Haury Chair in the Program in Environment and Social Justice at the University of Arizona. One of the world's most-cited scholars and a public intellectual regarded by millions of people as a national and international treasure, Chomsky has published more than 150 books in linguistics, political and social thought, political economy, media studies, U.S. foreign policy and world affairs. His latest books are *Illegitimate Authority: Facing the Challenges of Our Time* (forthcoming; with C.J. Polychroniou); *The Secrets of Words* (with Andrea Moro; MIT Press, 2022); *The Withdrawal: Iraq, Libya, Afghanistan, and the Fragility of U.S. Power* (with Vijay Prashad; The New Press, 2022); and *The Precipice: Neoliberalism, the Pandemic and the Urgent Need for Social Change* (with C.J. Polychroniou; Haymarket Books, 2021).

C.J. Polychroniou: Noam, as we enter a new year, I want to start this interview by asking you to highlight the biggest challenges facing our world today and whether you would agree with the claim that human progress, while real and substantial in some regards, is neither even nor inevitable?

Noam Chomsky: The easiest way to respond is with the Doomsday Clock, now set at 100 seconds to midnight, likely to advance closer to termination when it is reset in a few weeks. As it should, considering what's been happening in the past year. The challenges it highlighted last January remain at the top of the list: nuclear war, global heating, and other environmental destruction, and the collapse of the arena of rational discourse that offers the only hope for addressing the existential challenges. There are others, but let's look at these.

Washington has just agreed to provide Ukraine with Patriot missiles. Whether they work or not is an open question, but Russia will assume a worst-case analysis and consider them a target. We have few details, but it's likely that U.S. trainers come with the missiles, hence are targets for Russian attack, which might move us a few steps up the escalation ladder.

That's not the only possible ominous scenario in Ukraine, but the threats of escalation to unthinkable war are not just there. It's dangerous enough off the coast of China, particularly as Biden has declared virtual war on China and Congress is seething at the bit to break the "strategic ambiguity" that has maintained peace regarding Taiwan for 50 years, all matters we've discussed before.

Without proceeding, the threat of terminal war has increased, along with foolish and ignorant assurances that it need not concern us.

Let's turn to the environment. On global warming, the news ranges from awful to horrendous, but there are some bright spots. The Biodiversity Convention is a major step toward limiting the lethal destruction of the environment. Support is almost universal, though not total. One state refused to sign, the usual outlier, the most powerful state in world history. The GOP, true to its principles, refuses to support anything that might interfere with private power and profit. For similar reasons, the U.S. refused to sign the Kyoto Protocols on global warming (joined in this case by Andorra), setting in motion a disastrous failure to act that has sharply reduced the prospects for escape from catastrophe.

I don't mean to suggest that the world is saintly. Far from it. But the global hegemon stands out.

Let's turn to the third factor driving the Doomsday Clock toward midnight: the collapse of the arena of rational discourse. Most discussion of this deeply

troubling phenomenon focuses on outbursts in social media, wild conspiracy theories, QAnon and stolen elections, and other dangerous developments that can be traced in large part to the breakdown of the social order under the hammer blows of the class war of the past 40 years. But at least we have the sober and reasoned domain of liberal intellectual opinion that offers some hope of rational discourse.

Or do we?

What we see in this domain often defies belief — and evokes ridicule outside of disciplined Western circles. For example, the leading establishment journal of international affairs soberly informs us that a Russian defeat “[would reinforce the principle](#) that an attack on another country cannot go unpunished.”

The journal is referring to the principle that has been upheld so conscientiously when we are the agents of aggression — a thought that surfaces only among those who commit the unpardonable crime of applying to ourselves the principles that we valiantly uphold for others. It’s hard to imagine that the thought has never surfaced in the mainstream. But it’s not easy to find.

Sometimes what appears is so outlandish that one is entitled to wonder what may lie behind it, since the authors can’t believe what they are saying. How, for example, can someone react to a story headlined “[No conclusive evidence Russia is behind Nord Stream attack](#),” going on to explain that, “World leaders were quick to blame Moscow for explosions along the undersea natural gas pipelines. But some Western officials now doubt the Kremlin was responsible,” even though the Russians probably did it in order to “strangle the flow of energy to millions across the continent”?

It’s true enough that much of the West was quick to blame Russia, but that’s as informative as the fact that when something goes wrong, Russian apparatchiks are quick to blame the U.S. In fact, as most of the world recognized at once, Russia is about the least likely culprit. They gain nothing from destroying a valuable asset of theirs; Russian state-owned Gazprom is the major owner and developer of the pipelines, and Russia is counting on them for revenue and influence. If they wanted to “strangle the flow of energy,” all they would have to do is to close some valves.

As the sane parts of the world also recognized at once, the most likely culprit is

the only one that had both motive and capability. U.S. motive is not in question. It has been publicly proclaimed for years. President Biden explicitly informed his German counterparts, quite publicly, that if Russia invaded Ukraine the pipeline would be destroyed. U.S. capability is of course not in question, even apart from the huge U.S. naval maneuvers in the area of the sabotage just before it took place.

But to draw the obvious conclusion is as ludicrous as holding that the noble “principle that an attack on another country cannot go unpunished” might apply when the U.S. attacks Iraq or anyone else. Unspeakable.

What then lies beyond the comical headline “No conclusive evidence Russia is behind Nord Stream attack” — the Orwellian translation of the statement that we have overwhelming evidence that Russia was not behind the attack and that the U.S. was.

The most plausible answer is the “thief, thief” technique, a familiar propaganda device: When you’re caught with your hands in someone’s pocket, don’t deny it and be easily refuted. Rather, point somewhere else and shout “thief, thief,” acknowledging that there is a robbery while shifting attention to some imagined perpetrator. It works very well. The fossil fuel industry has been practicing it effectively for years, as we’ve discussed. It works even better when embellished by the standard techniques that make U.S. propaganda so much more effective than the heavy-handed totalitarian variety: foster debate to show our openness, but within narrow constraints that instill the propaganda message by presupposition, which is much more effective than assertion. So, highlight the fact that there is skepticism about Russian depravity, showing what a free and open society we are while establishing more deeply the ludicrous claim that the propaganda system is seeking to instill.

There is, to be sure, another possibility: Perhaps segments of the intellectual classes are so deeply immersed in the propaganda system that they actually can’t perceive the absurdity of what they are saying.

Either way, it’s a stark reminder of the collapse of the arena of rational discourse, right where we might hope that it could be defended.

Unfortunately, it’s all too easy to continue.

In short, all three of the reasons why the Clock had been moved to 100 seconds to midnight have been strongly reinforced in the past year. Not a comforting conclusion, but inescapable.

Scientists are warning us that global warming is such an existential threat to the point that civilization is headed toward a major catastrophe. Are apocalyptic claims or views about global warming helpful? Indeed, what will it take to achieve successful climate action, considering that the most powerful nation in history is actually “a rogue state leading the world toward ecological collapse,” as George Monbiot aptly put it in a [recent op-ed](#) in The Guardian?

The Yale University Climate [program on climate and communication](#) has been conducting studies on how best to bring people to understand the reality of the crisis facing humanity. [There are others, from various perspectives.](#)

It is a task of particular importance in the “rogue state leading the world toward ecological collapse.” It is also a task of difficulty, given that denialism not only exists in some circles but has been close to official policy in the Republican Party ever since this extremist organization succumbed to the offensive of the Koch energy conglomerate, launched when the party seemed to be veering toward sanity during the 2008 McCain campaign. When party loyalists hear their leaders, and their media echo chamber, assuring them “not to worry,” it’s not easy to reach them. And though extreme, the GOP is not alone.

It seems to be generally agreed that apocalyptic pronouncements are not helpful. People either tune off or listen and give up: “*It’s too big for me.*” What seems to be more successful is focusing on direct experience and on steps that can be taken, even if small. All of this is familiar to organizers generally. It’s a hard path to follow for those who are aware of the enormity of the crisis. But efforts to reach people have to be tailored to their understanding and concerns. Otherwise, they can descend to self-serving preaching to a void.

Recently, we discussed in another interview [the aims and effects of neoliberal capitalism](#). Now, neoliberalism is often enough conflated with globalization, but it is rather obvious that the latter is a multidimensional process that has existed long before the rise of neoliberalism. Of course, the dominant form of globalization today is neoliberal globalization, but this is not to say that globalization must be structured around neoliberal policies and values, or to think

that “there is no alternative.” There are indeed continuous struggles across the world for democratic control over states, markets and corporations. My question thus is this: Is it utopian thinking to believe that the status quo can be challenged and that another world is possible?

Globalization simply means international integration. It can take many forms. The neoliberal globalization crafted mostly during the Clinton years was designed in the interest of private capital, with an array of highly protectionist investor-rights agreements masked as “free trade.” That was by no means inevitable. Both the labor movement, and Congress’s own research bureau (the Office of Technology Assessment, or OTA) proposed alternatives geared to the interests of working people in the U.S. and abroad. They were summarily dismissed. The OTA was disbanded, according to reports, because [Newt Gingrich’s GOP regarded it](#) as biased against them, though it may be that Clintonite New Democrats shared the sentiment about fact and reason. Capital flourished, including the mostly predatory financial system. Labor was severely weakened, with consequences that reverberate to the present.

Globalization could take a very different form, just as economic arrangements can quite generally. There is a long history of efforts to separate the political from the economic domain, the latter conceived as purely objective, like astronomy, guided by specialists in the economics profession and immune to the agency of ordinary citizens, labor in particular. [One very impressive recent study](#), by Clara Mattei, argues persuasively that this dichotomy, typically taking the form of austerity programs, has been a major instrument of class war for a century, paving the way to fascism, which was indeed welcomed by Western elite opinion, with enthusiasm by “libertarians.”

There is, however, no reason to accept the mythology. The political domain in a broad sense, including labor and other popular activism, can shape the economic system in ways that will benefit people, not profit and private power. The rise of social democracy illustrates that well, but there is also no reason to accept its tacit assumption that capitalist autocracy is a law of nature. To quote Mattei, “either the organizations of people can move beyond capitalist relations [to economic democracy], or the ruling class will reimpose its rule.”

The status quo can certainly be challenged. A far better world is surely within reach. There is every reason to honor the slogan of the World Social Forum that

“Another world is possible,” a far better one, and to devote our efforts to bring it to reality.

C.J. Polychroniou is a political scientist/political economist, author, and journalist who has taught and worked in numerous universities and research centers in Europe and the United States. Currently, his main research interests are in U.S. politics and the political economy of the United States, European economic integration, globalization, climate change and environmental economics, and the deconstruction of neoliberalism’s politico-economic project. He is a regular contributor to *Truthout* as well as a member of *Truthout*’s Public Intellectual Project. He has published scores of books and over 1,000 articles which have appeared in a variety of journals, magazines, newspapers and popular news websites. Many of his publications have been translated into a multitude of different languages, including Arabic, Chinese, Croatian, Dutch, French, German, Greek, Italian, Japanese, Portuguese, Russian, Spanish and Turkish. His latest books are *Optimism Over Despair: Noam Chomsky On Capitalism, Empire, and Social Change* (2017); *Climate Crisis and the Global Green New Deal: The Political Economy of Saving the Planet* (with Noam Chomsky and Robert Pollin as primary authors, 2020); *The Precipice: Neoliberalism, the Pandemic, and the Urgent Need for Radical Change* (an anthology of interviews with Noam Chomsky, 2021); and *Economics and the Left: Interviews with Progressive Economists* (2021).

We Can’t Combat Inequality Without First Valuing Care Work

*Nancy Folbre - Photo:
wikipedia*

A feminist political economy addresses gender inequalities, but also seeks to rectify inequalities in labor division

Patriarchy and capitalism are class-based systems that serve to compound inequalities of all sorts, including gender inequality. A feminist political economy not only addresses gender inequalities, but also seeks to rectify inequalities in the division of labor. Of course, there are different branches of feminism, but a strong case can be made that a socialist feminist perspective of political economy, such as that adopted by renowned feminist economist Nancy Folbre, is best equipped to combine theory and praxis for understanding and overcoming capitalist inequalities of class, gender and race. Indeed, Folbre's work is defined by the construction of an intersectional socialist feminist perspective.

Nancy Folbre is professor emerita of economics and director of the Program on Gender and Care Work at the Political Economy Research Institute (PERI) at the University of Massachusetts, Amherst. She is the author of scores of academic articles and numerous books, including *For Love and Money: Care Provision in the U.S.* and, most recently, *The Rise and Decline of Patriarchal Systems: An Intersectional Political Economy*.

C.J. Polychroniou: I want to start this interview by asking you to elaborate a bit on the socialist feminist perspective of political economy, which you essentially helped to institutionalize, and explain how it differs from mainstream feminist political economy. Indeed, why bring socialism into feminism?

Nancy Folbre: I wish I could agree that a socialist feminist perspective has been “institutionalized.” I do think it has gained some visibility, and with that, some political leverage. I am also convinced that it is gaining traction and will ultimately shape the political future.

Socialist feminism is not a newcomer to political economy. Many of its principles were laid out in the early 19th century by two Irish radicals who are often lumped in with the pre-Marxian “utopian socialists,” William Thompson and Anna Wheeler. They are sometimes mentioned in history books as early advocates of women’s right to vote, famous for their *Appeal of One Half of the Human Race, Women, Against the Pretensions of the Other Half, Men, to Retain Them in Political, and Thence in Civil and Domestic Slavery* in 1825. Yet they reached far beyond the issue of women’s rights to insist that no economic system based primarily on individual competition could ever achieve gender equality, because tasks of child-rearing and family care require social cooperation and commitment to the well-being of future generations.

This claim lies, implicitly or explicitly, at the heart of socialist feminism. It helps explain the economic vulnerability of those who specialize in care provision in a capitalist society and the need to collectively invest in sustainable forms of development that do not prioritize profit maximization. Socialist feminists are closely aligned with ecological and climate activists in their emphasis on the need to develop more cooperative institutions. Socialist feminist political economy suggests that inequality can be a serious impediment to what might be termed (to evoke a Marxian term) “socially necessary” cooperation — or (to apply neoclassical economic jargon) “socially optimal” cooperation.

Socialist feminist political economy also suggests that capitalist societies are headed for intensified crises, not because of a falling rate of profit or a rising rate of exploitation, but because they encourage disregard for the physical and social environment in the pursuit of short-term self-interest. The degradation of human capabilities through violence, exploitation and poverty is one example of the many forms of pollution that are fouling our nest.

Gender inequality has existed throughout human history, and U.S. capitalism clearly perpetuates gender inequality. Why is gender inequality so pervasive and how does social class figure into gender discrimination?

I wouldn't universalize gender inequality to the same extent you imply here. Yes, it is a persistent theme of recorded human history, but it has often taken different forms, linked to and crosscut by differences based on race, ethnicity and class.

The historical record suggests that some early gatherer-hunter societies were relatively nonhierarchical, egalitarian groups, even with respect to gender differences. Some such societies — such as the Hadza of Tanzania — persist today. Likewise, some societies today follow matriarchal practices — not the mirror image of patriarchal practices, but ones in which women and mothers control significant property — such as the Khasi of India.

Anthropologist Sarah Hrdy argues that the advantages of cooperative child-rearing were an important impetus to the evolution of other forms of in-group cooperation.

Sadly, patriarchal groups who sent young men into combat to claim new territory and capture young women successfully preyed on more peaceful and egalitarian groups, a dynamic intensified by the development of private property and new hierarchies based on race and class.

Gerda Lerner has argued persuasively that the institution of slavery evolved from the seizure of women. Plutarch's account of the founding of Rome fits this story, which also features in the Old Testament of the Holy Bible: Deuteronomy 21 specifies that women captured during war could be "taken as wives" after one month.

Once firmly established, patriarchal institutions proved remarkably persistent: A division of labor that disempowered women was imposed upon young people at an early age, enforced by physical force as well as religious doctrine. It is entirely possible that these exploitative institutions conferred some military and demographic advantages on the groups that adopted them, facilitating their expansion.

The emergence of class differences based on property ownership had contradictory effects on gender inequality. The two dimensions of inequality reinforced each other in some respects. By offering distinct economic privileges to women family members, while keeping them under tight sexual control, male rulers kept women divided. At the same time, their guarantees of patriarchal power offered lower-class men at least a semblance of compensation for class

exploitation. One of the most memorable illustrations of this is Sir Robert Filmer's *Patriarcha* published in 1680, which explicitly based the divine right of kings on the divine right of fathers. And indeed, many fathers in that day enjoyed considerable legal and economic power over their adult children.

On the other hand, the emergence of intensified differences based on race and class weakened patriarchal institutions in some respects, putting some women and young adults in contradictory positions, where they enjoyed privileges as members of elite families and gained at least some cultural voice. John Locke wrote a scathing attack on Sir Robert Filmer, and while his liberal theories provided an ideological justification for private property and wage employment, they also undermined allegiance to the divine right of fathers.

Historically, I see a complex dialectic between class, race and nationality, and gender, age and sexuality, sometimes leading to uneven but significant weakening of patriarchal institutions. I lay out some evidence pertaining to western Europe in my book *The Rise and Decline of Patriarchal Institutions*, emphasizing the perverse consequences of colonization and slavery.

You have produced an enormous amount of work on the care economy. How do we define care work and how does it contribute to gender inequality? Moreover, what policy solutions do you propose for dealing with the problem of unpaid care work?

"Care" is a big, complicated word that can mean a lot of things, and "care work" gets defined in many different ways by different people. So let me start by saying that I propose a very broad definition — it goes beyond child care to include the care of other people, especially (but not exclusively) people who need help taking care of themselves (which is actually, most of us, at one time or another). While a lot of care work is unpaid, a fairly large number of paid jobs in health, education and social welfare also involve care provision. And care work can take different forms: Direct care typically involves face-to-face, hands-on, personal interaction. Indirect care is less interactive, but supplies the environment in which direct care is provided, such as providing food, cleaning up messes and guaranteeing safety. Supervisory care is less an activity than a responsibility — being on call, physically and emotionally available to provide assistance if needed.

So, what makes care work distinctive? First of all, it has a distinctive "output" —

the production, development and maintenance of human capabilities. The concept of capabilities, developed by Amartya Sen, Martha Nussbaum, and others, goes way beyond economists' typical use of the term "human capital," because capabilities don't necessarily "pay off" in the labor market. They encompass a range of capacities and contribute to many forms of social well-being through cooperative contributions to families, communities and the polity. Capabilities also have intrinsic value as means of self-realization and creative expression.

This definition of capabilities fits under the rubric of what is sometimes called "social reproduction" that is necessary for capitalism (or any other system) to reproduce itself over time. Yet the production of capabilities can't be reduced to the "production of labor power" because its implications reach far beyond the realm of wage employment. Direct care work is literally embodied in care recipients. Indirect care work develops and protects the opportunities for care recipients to successfully protect, exercise and expand their capabilities. Both direct and indirect care work can be interpreted as a form of investment that generates large personal and social returns.

The distinctive features of care "output" help explain why it involves a distinctive labor process that is also central to the definition of care work. Since care providers seldom have a direct claim on the value of capabilities they create — and since care recipients don't always know ahead of time what they want or need — care provision can seldom be squeezed into a process of impersonal exchange dictated by the forces of supply and demand. The quality of care provision often depends on some level of concern for the well-being of the care recipient — something biologists tend to call altruism and economists sometimes refer to as prosocial preferences.

The importance of concern for others is an obvious element of successful family and community life. Yet it is also apparent, though often in less personal forms, in the provision of paid care services. We value health care providers who care about their patients, educators who care about their students and social workers who care about their clients precisely because if they don't care, they're not likely to do a great job — especially since they are not paid by the market value of what they produce.

The distinctive features of both its output and its labor process help explain why care work tends to be economically devalued or undervalued by a capitalist

marketplace. The social benefits that it produces pay off enormously in the long run, but they are difficult to measure or to individually capture. And because commitments to provide care are deeply embedded in very gendered social norms and preferences, it is easy to take them for granted. Care workers can ask for reciprocity and respect, but it is difficult for them to threaten to withdraw their services if they aren't paid more — after all, they are, almost by definition, committed to helping others. As a result, they are often short on individual and collective bargaining power.

To resort to econo-speak, both unpaid and paid care providers are typically disadvantaged by a big gap between social contribution and private reward, especially in an economic and cultural environment in which private rewards are commonly interpreted as a measure of social contribution. In the world we live, it's not hard to hear people thinking: "You earn a lot of money? Wow, you must be really productive! You don't earn a lot of money? You must not be producing much."

The most common objection that I hear to this argument is "What about doctors? They are care workers, according to your definition, and yet they are among the most well-paid people in the country." Good point. It's important not to overgeneralize. A lot of specific personal and institutional factors influence earnings in the U.S. economy. Doctors overall have gained significant bargaining power in a very unhealthy health care system driven by a combination of market forces and bureaucratic collusion.

Still, the relative pay of different kinds of doctors illustrates my point: The most [highly paid](#) medical specialty in the U.S. is cosmetic surgery, where upscale patients are willing to pay enormous sums out-of-pocket to improve their personal appearance. The least highly paid medical specialty in the U.S. is public health, which includes prevention of infectious disease. Hardly anyone pays out of pocket for this enormous benefit, and it generates few profits of the type that investors can pocket for themselves.

So, to come back to your question about policy solutions, whether we're talking about unpaid or paid care, we need more public support for the provision of public benefits. We also need more equitable sharing of both the private and the public costs. Even a quick look at the Build Back Better legislation proposed by the Biden administration in the fall of 2022 — which would have extended public

support for families *and* raised wages for child care and elder care workers — shows that at least some Democrats are trying to help out the care economy.

In contemporary social, economic and political struggles in the U.S., gender, class, race and ethnicity do not intersect often enough, and surely not with enough energy and dynamism. Is this a case of theory running ahead of praxis? How do we bring intersectionality to the fight against capitalism and patriarchy?

This is such a crucial question and top priority — linking intersectionality to political strategy. Yet my take on it is almost the opposite of yours — I think that praxis has been running ahead of theory. Most progressive activists in the U.S. are very committed to challenging many dimensions of oppression, ranging from racism to reproductive rights, sexual harassment to homophobia to exploitation in employment. However, there is a lingering tendency to put issues related to race, gender and sexuality in a box called “identity” and issues related to exploitation in employment in a box called “class.”

The “identity” box highlights attitudes and language — what people say and who they side with. The “class” box highlights structural economic differences — real wages, unemployment, family income. This categorization causes problems — it pushes “identity” into furious debates about attitudes and language, and pushes “class” into something that can be reduced to economics. Instead, I think we need to acknowledge the economic consequences of group identity and the cultural construction of class.

There are two ways to put this — first, that class is an “identity” and, second, that socially assigned identities such as race or gender have very significant economic consequences (including exploitation, and not just by employers). This leads to a more complex picture of social division, one that helps explain why it is so difficult to overcome.

Let me put this in a less abstract way. As a feminist economist, I have argued, for years, that women have some common economic interests as women. Many critics (including feminists) have retorted that women can’t be categorized as an economic group because so many of them pool income with men. My response is, “Yes, but so what?” Everyone belongs to more than one economic group. Members of the U.S. working class enjoy significant benefits as citizens of the most economically powerful country in the world. (Marx and Lenin recognized the

importance of the “aristocracy of labor” long ago.) Also, many members of the working class enjoy significant benefits based on their race, their gender and their level of “human capital” in the form of educational credentials. This does not imply that they lack common interests based on class.

It does imply that many people inhabit somewhat contradictory positions, making it difficult for them to assess political strategies: Wins for one of the groups they belong to can mean losses for other groups they belong to, and it is not easy to figure out the net effects. “Make America Great Again” sounds like an empty (and hypocritical) slogan to me, but it effectively signals promises to restrict free trade and immigration that are both feasible (they have been implemented successfully in the past), and tangible (less competition for me and my kids in the workplace), even if they won’t really pay off in the long run.

I think this is what you are getting at when you say “struggles ... do not intersect enough.” Another way of putting it is that we are living through a period in which group interests don’t overlap enough — that is, enough to effectively mobilize progressive change. This problem doesn’t result from the theory of intersectionality; it’s a real-world problem that intersectional political economy tries to explain.

Of course, this explanation can be used to justify a fatalistic, even nihilist stance. But it should be used to think creatively about the need to better explain multidimensional inequalities without simply attributing them to bad attitudes. Most importantly, it should be used to develop political coalitions around principles of economic justice that emphasize the perverse consequences of the global concentration of capitalist power, but go beyond simple prescriptions like “end capitalism.”
